Tork PeakServe®: the latest innovation designed for high-traffic washrooms where staff need to maximise cleaning time and maintain a good flow of people. Compatible with Tork PeakServe dispenser, the system has a very high capacity of over 2100 towels, which can be dispensed quickly and without interruption to keep the flow. The compressed refills are fast to fill, can be topped up at any time and are easy to store and transport, enabling staff to focus on cleaning.

- Continuous hand towels dispense smoothly, even between bundles, for a better washroom flow with no hold ups for guests
- Compressed hand towels for increased capacity, reducing maintenance time required
- Economic sized and one at-a-time dispensing to reduce consumption
- Easy Handling Carry Packs with hand towels compressed by 50% for efficient handling, transport and storage

Environmental info	
Content	The product is made from Virgin pulp The packaging material is made from paper or plastic.
Material	Virgin fibres Virgin pulp fibres are produced out of softwood or hardwood. The wood is subject to chemical and/or mechanical processes where the cellulose fibres are separated out and lignin and other residuals are removed. Bleaching is a cleaning process of the fibres and the aim is to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety. There are different methods used today for bleaching: ECF (elementary chlorine free, where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used.
Chemicals	All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view. To control product performance we use additives: <ul style="list-style-type: none"> • Wet strength agents (for Wipers and Hand Towels) • Dry strength agents (is used together with mechanical treatment of the pulp to make strong products like wipers) • For coloured papers dyes and fixatives (to secure perfect fastness of the colour) are added • For printing products printing inks (pigments with carriers and fixatives) are applied • For multi ply products we often use water soluble glue to secure the integrity of the product <p>In most of our mills we do not add optical brighteners. We do not use softeners for professional hygiene products. High product quality is secured through quality and hygiene management systems throughout production, storage and transport. In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/process aids:</p> <ul style="list-style-type: none"> • defoamers (surfactants and dispersing agents) • pH-control (sodium hydroxide and sulphuric acid) • retention aids (chemicals that help to agglomerate small fibres to prevent fibre loss) • Coating chemicals (that help to control the creping of the paper to make it soft and absorbent) <p>To reuse broke we use:</p> <ul style="list-style-type: none"> • Pulping aid (chemicals that help to repulp wet strong paper) <p>In the cleaning of our waste water we use flocculation agents and nutrients for the biological treatment to secure that no negative impact on water quality comes from our mills.</p>
Food Contact	This product fulfills the legislative requirements for Food Contact materials, confirmed by external certification performed by a third party. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.
Environmental labels	This product is not approved for the EU Ecolabel.
Packaging	Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes
Article creation date and latest article revision	Date of issue: 2017-06-16 Revision date: 2018-01-01
Production	This product is produced at MANNHEIM mill, DE and certified according to EMAS (eco-management and audit scheme), FSC Chain-Of-Custody company certification "Well managed for, ISO 14001 (Environmental management systems), ISO 9001, and OHSAS 18001.
Destruction	This product is mainly used for personal hygiene and can be collected together with household waste.
